> Job Description

 **Job Profile**
1. Software Development Engineer **Package (CTC)**
5 LPA **Work Location**
Rajkot

Job Description

What This Role Is

- A hands-on software development role involving coding, debugging, testing, building features, collaborating with teams, and contributing to real product development.

What This Role Is Not

- A role focused only on theory, repetitive tasks, or isolated coding assignments. This position requires ownership, collaboration, learning, and active contribution.

Role Overview

- As a Software Developer, you will be responsible for designing, building, testing, and improving software products used by businesses across multiple industries.
- You will work closely with product managers, senior developers, QA engineers, and infrastructure teams to develop scalable applications and automation solutions.

Month 1–3

- Learn company products, workflows, and technology stack.
- Understand coding standards, Git, and development processes.
- Work on bug fixes and small development tasks.

Month 4–7

Build frontend / backend components and APIs.

Participate in feature development, testing, and debugging.

Contribute to deployments and product improvements.

Month 8–11

Independently develop features and modules.

Handle optimization, troubleshooting, and deployments.

Demonstrate readiness for full- time engineering responsibilities.

Day-to-Day Responsibilities

- Develop, test, and maintain software applications.
- Write clean, scalable, and reusable code.
- Build frontend and backend features.
- Develop and consume REST APIs.
- Participate in code reviews and debugging activities.
- Work with databases and optimize queries.
- Collaborate with QA, Product, and Infrastructure teams.
- Support deployment activities and troubleshooting.
- Learn and work with modern engineering practices and tools.

As You Grow (After Internship Completion)

- Independently own development tasks and deliverables.
- Improve coding standards and software quality practices.
- Contribute to architecture discussions and technical decisions.
- Work on automation, optimization, and scalability initiatives.
- Take ownership of modules and product features.

Good to Have

- Knowledge of any of Node.js, Python, React or Angular.
- Familiarity with HTML, CSS, JavaScript, and APIs.
- Basic knowledge of cloud platforms (AWS/Azure/GCP).
- Understanding of Git and version control systems.
- Exposure to Docker or containerization technologies.
- Linux or scripting knowledge.

What You Will Learn

- Most entry-level jobs give you tasks. This one gives you engineering experience.

- In your first year at Kevit, you will develop skills valuable across software companies.
- **Software Development** Learn professional coding practices and software engineering principles.
- **Backend Development** Understand APIs, server-side logic, databases, and architecture.
- **Frontend Development** Learn UI development and customer-facing product building.
- **Cloud & Infrastructure** Gain exposure to deployment, cloud platforms, and scalability.
- **Product Engineering** Understand how software products are built and maintained.
- **AI & Automation Exposure** Learn Work with conversational automation, AI systems, and modern tools.

Skills Required

- Strong logical thinking and problem-solving ability
- Good understanding of programming fundamentals
- Willingness to learn new technologies
- Strong ownership mindset
- Ability to work collaboratively in teams
- Good communication skills

Selection Process

1. Written Test
2. Technical Assessment
3. Group Discussion
4. Technical Interview
5. HR Round

Placement Cell Contact Person

PARASKUMAR BAKHAI

Mob. : 9099908506

Deadline: 4th June, 2026

Other Information

Eligible Branch: CS Streams - 2027 batch

Training Duration: 01/07/2026 to 31/05/2027

Stipend during training period: Rs. 6,000 per month

Bond Tenure: 01/07/2026 to 31/05/2028 (Internship + 1 Year)

Joining: 1st July, 2026

Internship Evaluation: Exam & Review (Minimum 50% passing criteria)

About Company

Kevit Technologies Private Limited is a conversational automation and Agentic AI company based in Rajkot, Gujarat. We help businesses automate customer communication across WhatsApp, RCS, chatbots, and other messaging channels. Their clients span industries such as BFSI, telecom, education, healthcare, and various enterprise sectors. They are a growing technology company focused on innovation, automation, and building scalable products.

At Kevit, software developers do more than just write code. They build products that directly impact customer experience, business growth, and AI-driven automation solutions.
