 **Job Profile**

1. Fullstack Developer
2. Quality Analyst
3. HTML Developer
4. DevOps Engineer
5. Graphic & UI/UX Designer
6. Business Analyst

 **Package (CTC)**
3.50 - 5.50 LPA **Work Location**
Ahmedabad

Job Description

1. Fullstack Developer

Roles & Responsibilities

- Build and maintain front-end interfaces - responsive, accessible, and well-integrated with backend services.

- Contribute to backend development: APIs, services, and data handling that power real applications.
- Work across different parts of the stack depending on project needs - front-end, back-end, or both.
- Participate in design and architecture discussions, bringing a user-centred perspective to technical decisions.
- Write clean, well-tested code and maintain documentation so others can work with what you build.
- Keep your team informed. Flag blockers early, share progress in real time, and communicate when something changes - no surprises.
- Collaborate with designers, product managers, scientists, and engineers to turn requirements into working software.

Skills & Characteristics

- Proficient knowledge of relational or non-relational database systems, Object-Oriented Programming (OOP), data structures and algorithmic thinking
- Strong passion for frontend and backend technologies, clean code practices, and continuous improvement.
- Basic understanding of programming languages and frameworks such as JavaScript, Node.js, Laravel, PHP, TypeScript, React.js, HTML, and CSS.
- Familiarity with web application development.
- Familiarity with Software Development Life Cycle (SDLC) concepts and Agile methodologies.
- Willingness to gain product visualisation skills and adopt a user-first design approach.
- Analytical thinking and a creative mindset to approach problem-solving innovatively.

Effective communication and collaboration skills.

- Highly self-motivated with a proactive attitude and a willingness to take initiative on projects.
- Ability to work under tight deadlines while maintaining attention to detail.
- Team-oriented mindset with a readiness to work in a transparent, fast-paced, and entrepreneurial environment.
- Positive attitude, focused work ethic, and a growth mindset aligned with kindness and empathy.
- Curiosity, enthusiasm, and the courage to innovate and contribute to building a collaborative and inspiring o2h culture.

2. Quality Analyst

Roles & Responsibilities

- Document test cases with clear, concise descriptions. Ensure comprehensive test coverage by considering various user scenarios and edge cases.
- Identify bugs in the system and report to the team using bug tracking tools like Jira. Collaborate with development teams to ensure defects are properly identified, fixed, and tested.

- Assist in ensuring that high-quality work is delivered to clients by participating in all phases of the testing lifecycle.
- Validate that user expectations are achieved during the testing process. Adopt the end-user's perspective to ensure that the application's user experience is seamless.
- Ensure that business-critical functionalities are thoroughly tested and remain unbroken.
- Flag repetitive test processes or gaps in coverage to the team lead.
- Help in preparing reports and summaries of test findings for the team and stakeholders

Skills & Characteristics

- Knowledge of quality inspection, auditing, and testing
- Demonstrate a strong passion for software testing and quality assurance
- We expect the ideal candidate to stay updated with industry best practices and testing techniques to continually improve testing skills
- Be open to learning new tools and technologies as required by the project
- Adapt to changing project requirements and priorities with a flexible mindset
- Exhibit patience and persistence, even when tasks are repetitive or challenging
- Good communication skills, both written and verbal
- Knowledge of how to document test cases and execute them in different test cycles.
- Must be aware of testing methodologies such as system testing, integration testing, API testing, functional testing, smoke testing, sanity testing, regression testing etc.
- Basic knowledge of tools such as JIRA
- Knowledge of basic programming concepts and object-oriented programming. Exposure to automation concepts is welcome but not required
- Strong analytical and problem-solving skills
- Must be aware of the STLC and bug cycle
- Meticulous attention to detail and good analytical skills
- Ability to work in a team in a transparent and entrepreneurial culture
- Curiosity, energy, creativity, and bravery with a strong desire to help to build the o2h culture

3. HTML Developer

Roles & Responsibilities

- Strong understanding of HTML5 semantic markup and web standards.
- Good knowledge of CSS3, Flexbox, Grid, responsive design, and media queries.
- Basic to intermediate JavaScript (ES6+) knowledge.
- Experience with SCSS/SASS and CSS architecture best practices.
- Familiarity with browser developer tools for debugging and troubleshooting.

- Understanding of cross-browser compatibility and responsive layouts.
- Ability to convert Figma, Adobe XD, or Photoshop designs into pixel-perfect web pages.
- Knowledge of website performance optimization techniques.
- Understanding of web accessibility (WCAG) principles.
- Basic understanding of Git and version control workflows.

Skills & Characteristics

- Experience with Bootstrap, Tailwind CSS, or similar frameworks.
- Familiarity with React.js or modern JavaScript frameworks.
- Understanding of REST APIs and API integration.
- Knowledge of SEO-friendly front-end development practices.
- Exposure to build tools such as Vite, Webpack, or npm-based workflows.
- Familiarity with AI-assisted development tools such as GitHub Copilot, Cursor, or ChatGPT and the ability to review, validate, and optimize AI-generated code.
- In-depth knowledge of front-end coding languages including HTML, CSS, SCSS, JavaScript and jQuery.
- Ability to troubleshoot coding and application errors.
- Knowledge of web design and user application requirements.
- Strong attention to details
- Good communication skills across all platforms
- Creative mindset – and the ability to approach a problem creatively
- Good analytics skills
- Highly organized with the ability to work independently in a fast paced team environment
- Ability to work in a team in a transparent and entrepreneurial culture
- Self-motivated with initiative to reach challenging targets
- Ready to work in any o2h locations and shifts (First, General, Adj. Gen and Second)
- Exceptional attention to detail
- Positivity, focus and a winning mentality allied with kindness
- Curiosity, energy, creativity, and bravery with a strong desire to help to build the o2h culture

4. DevOps Engineer

Roles & Responsibilities

- Assist in managing and maintaining development, test, and staging environments on AWS.
- Support CI/CD pipelines using Bitbucket Pipelines and other automation tools.
- Work with version control systems such as Git and Bitbucket.
- Gain hands-on experience with Docker, cloud services, and infrastructure management.
- Assist in monitoring applications and troubleshooting technical issues.

- Support root cause analysis for production incidents and help implement fixes.
- Work with SQL/MySQL databases and integrate applications with internal systems.
- Build and maintain scripts using Python, PHP, Perl, Ruby, or similar technologies.
- Collaborate with development teams to improve deployment and release processes.
- Work on Windows and Linux platforms and assist with build tools such as Maven and Ant.

Skills & Characteristics

- Basic understanding of AWS, Docker, Git, and CI/CD concepts.
- Familiarity with programming or scripting languages such as Python, PHP, Ruby, or Perl.
- Good knowledge of SQL/MySQL, Linux environments and RPM packaging.
- Eagerness to learn DevOps tools, cloud technologies, and automation practices.
- Good command over quality processes & estimation skills
- Good understanding of continuous integration tools: Jenkins and Bitbucket Pipeline.
- Adequate knowledge of relational database systems, Object Oriented Programming and web application development
- Well-versed with MS Suite including MS Excel, MS Doc, MS PowerPoint and related
- Knowledge of SDLC concepts and Agile methodologies
- Be highly motivated to initiate projects and work under aggressive deadlines
- Good communication skills across all platforms
- Strong analytical and problem-solving skills.
- Creative mindset – and the ability to approach a problem creatively
- Strong passion for backend technology, best practices and continuous improvement
- Highly organized with the ability to work independently in a fast paced team environment
- Ability to work in a team in a transparent and entrepreneurial culture
- Self-motivated with initiative to reach challenging targets
- Exceptional attention to detail
- Positivity, focus and a winning mentality allied with kindness
- Curiosity, energy, creativity, and bravery with a strong desire to help to build the o2h culture

5. Graphic & UI/UX Designer

Role & Responsibilities

- Collaborate with stakeholders to understand project requirements and use wireframing tools to create functional user-interface designs.

- Work with various teams to build, refine, and implement UI designs for applications, websites, and marketing materials.
- Convert wireframes into high-fidelity UI designs, ensuring visual appeal and consistency.
- Develop clear concepts and creative assets, taking them from initial ideas through to final execution.
- Use conceptual thinking to transform ideas into visually compelling and functional designs.
- Maintain and update comprehensive web style guides for both consumer and business-facing products.
- Stay informed about brand impact and promotional strategies to ensure design consistency across platforms.
- Provide insights on web design best practices, staying ahead of next-generation design trends.
- Create high-fidelity mock-ups and prepare editable files for the development team.
- Contribute to the development of a new brand identity and ensure its cohesive application across multiple platforms.
- Manage and assist in the creation of engaging social media advertisements.

Skills & Characteristics

- Proficiency in design tools such as Adobe Photoshop, Illustrator, XD, InDesign, Figma, InVision, UXPin, or equivalent applications.
- Hands-on experience in UI/UX and graphic design, with a strong portfolio to showcase your work.
- Ability to translate business requirements, user needs, and technical specifications into visually engaging, user-friendly, and emotionally resonant designs.
- Familiarity with Agile and Scrum development methodologies, ensuring smooth collaboration with cross-functional teams.
- Knowledge of browser compatibility across various platforms and devices, ensuring seamless user experiences.
- Basic understanding of HTML and CSS, with the ability to apply design concepts to web development.
- Eagerness to develop product visualisation skills and adopt a user-first design approach.
- Proficient in Microsoft Office Suite (Excel, Word, PowerPoint) and related tools.
- Self-driven, highly motivated to take initiative and meet challenging deadlines.
- Strong communication and analytical skills across all platforms, enabling effective collaboration with diverse teams.
- Creative mindset with the ability to approach problems in innovative and unique way.
- A team player, thriving in a transparent, entrepreneurial, and collaborative culture.
- Proactive and self-motivated, driven to achieve ambitious targets and contribute to team success.

- Exceptional attention to detail, ensuring high-quality work and consistent standards.
- Positive, focused, and determined, with a winning mentality and a collaborative spirit.
- Curious, energetic, creative, and brave, with a strong desire to contribute to and help shape the o2h culture.

6. BUSINESS ANALYST

Roles & Responsibilities

- Build and manage strong relationships with partners to optimize and enhance system integrations.
- Collaborate with senior team members to implement customer requirements and support enhancements.
- Work closely with stakeholders to identify business problems and translate them into clear functional and non-functional requirements.
- Conduct requirement gathering, analysis, and gap assessments to support project planning and execution.
- Create Functional Requirement Documents (FRDs), wireframes, and user stories to guide development teams.
- Contribute to pre-sales efforts by defining scope, estimating effort, and preparing proposals.
- Define configuration specifications and document business analysis requirements.
- Support implementation, solution design, configuration, and review processes across projects.
- Continuously identify opportunities to improve systems, monitor performance, and deliver enhanced value to clients.
- Communicate key findings and performance insights proactively with relevant internal teams.
- Participate in both strategic and tactical planning discussions to align project goals with business outcomes.
- Lead project meetings, manage stakeholder expectations, and drive team accountability throughout the project lifecycle.

Skills & Characteristics

- Strong verbal communication and presentation skills with the ability to build and manage relationships with internal and external stakeholders.
- Excellent written communication skills, including business and technical writing, proofreading, and documentation.
- High attention to detail with strong documentation and organisational abilities.
- Demonstrates accountability, ownership, and reliability in completing assigned tasks.
- Understands the value of collaboration and effectively manages expectations across teams and partners.

- Good understanding of modern technologies and frameworks related to IT software development.
- Proficient with Google Workspace (Sheets, Docs, Slides) and Microsoft Office Suite (Excel, Word, PowerPoint).
- Familiarity with productivity and project management tools such as JIRA, Trello, and Notion.
- Basic understanding of Software Development Life Cycle (SDLC), Agile, Waterfall, Lean methodologies, and Scrum frameworks.
- Foundational knowledge of business modelling techniques and analytical methods.
- Self-motivated with a proactive approach to initiating projects and meeting tight deadlines.
- A team player, thriving in a transparent, entrepreneurial, and collaborative culture.
- Highly organized, adaptable, and capable of thriving in a transparent and entrepreneurial culture.
- Brings curiosity, creativity, energy, and a strong desire to contribute to and shape the o2h tech culture.
- Possesses exceptional attention to detail, a positive outlook, and a solution-oriented mindset grounded in kindness and team spirit.

Other Information

Eligible Branch: BE(CE/IT/ICT) & MCA 2027 Batch

Package:

- **Stipend:** Rs 12,000 per month during the 6-month internship period starting **January 2027**.
- **Proposed CTC:** 3.5 LPA (Lakhs Per Annum) to 5.5 LPA based on performance during the internship.
- **Collaborator Performance and Retention Bonus:** Eligible for bonuses based on performance and retention.
- **Leaves:** Paid exam leaves up to 5 working days and an additional 6 days of leave during the internship period.

Perks & Benefits:

- No bond system
- Mediclaim insurance
- Flexible timing to accommodate your commitments outside work
- Freedom of thought and creativity to initiate and implement entrepreneurial ideas
- Work in dynamic cross-functional teams
- Customised training and development plans for each of our employee
- A flexible and vibrant career progression that is supported by your peers and your manager
- A chance to work with international clients
- A chance to lead and manage at a very young age

About Company

Our HQ is in Cambridge, UK where we have a science and technology incubator. Cambridge has some of the most exciting technology and AI innovations in the world and we are working with many of those companies in o2h. Prashant and Sunil founded the current company (o2h Group) in 2011. The o2h technology vertical was founded in 2017 with the idea of building a culture where biology, science, and technology teams will work together for mutual inspiration

and innovation. o2h technology is a services group that provides customised software development and digital services including web, mobile, and emerging technologies such as GenAI, AI/ML, AI agents, BlockChain, Three JS, Next JS, GCP, Azure, Django, Ruby on rails, javascript, PHP, Laravel, React JS, Node JS, Nest JS, GraphQL, Typescript, Flutter, React Native, IOS, Android, Python, Serverless, Cloud formation, Docker, Linux, AWS, Tensorflow, PyTorch and various other technologies. The capabilities of o2h technology include website builds, an MVP(minimal viable product) for a start-up firm, or an end-to-end customised software build for midsize to enterprise customers. At o2h tech, we build the most exciting products to digitise life sciences, health tech, and green tech. We utilise all the latest web technologies to build great products for startups and fast-moving companies in the UK and around the world.
